#### **DATASHEET**

# JE-Inspect Monitoring system

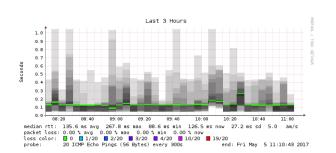

Surveillance of hardware, software, network

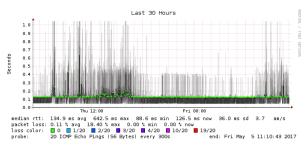

# JE-Inspect

## **Monitoring System**

Measuring of network

Measuring of temperature

#### **Temperature**

**Power supply** 

**Network / services** 

**Alarm** 

Working with individual threshold values, **JE-Inspect** detects critical conditions and informs the responsible person automatically.

The system registers upcoming difficulties before they occur. Necessary actions can thus be planned with sufficient lead time and downtime can be lowered or avoided.

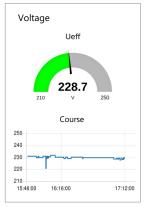

Required data are queried continuously by **JE-Inspect** and presented in an overview. Notifications and alarms can be transmitted via e-mail, text message, or sound notification.

**JE-Inspect** can be integrated into existing server racks. The output is realized with a web browser interface and a stationary display.

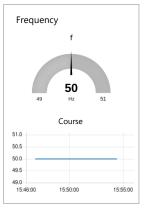

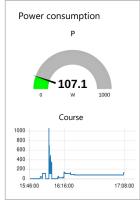

# JE-Inspect

## **Monitoring System**

Measuring of power supply

## **Advantages**

- ✓ Early alert system
- ✓ Web based operating (independent from operating system)
- ✓ Customer specific installation
- ✓ Individual extensions
- ✓ Can be integrated into existing system
- Database system (evaluation of development in relation to time)

## **Temperature**

- ✓ Inside
- ✓ Outside
- ✓ Surrounding
- ✓ Housing

## **Power supply**

- ✓ Power
- √ Voltage
- ✓ Frequency
- ✓ Power consumption

#### **Network / Services**

- ✓ Ping/-Timeout
- Responding time / speed
- ✓ JE software
- ✓ MySQL

#### **Alarm**

- ✓ User defined thresholds
- ✓ Information via:
- ✓ E-Mail (customer network or JE interface)
- ✓ Optical and acoustical signals
- ✓ Different alarm levels
